Executive Summary

This report offers a thorough digital marketing plan for The Urban Co-op, an innovative local organic grocery store and community centre situated in Limerick. The Urban Co-op, a small regional business with a strong focus on sustainability, local sourcing, and community involvement, has significant growth potential.

The Urban Co-op was established in 2013 as a community-driven buying club and has since grown to become an important player in Limerick's local economy. Today, it serves as a local and organic grocery store, a wellness centre with classes and treatments, and a focal point for education and community. A rising number of customers are drawn to the Co-op's core values, which include sustainability, ethical sourcing, zero waste, and community emphasis.

Our campaign "Support Local. Eat Well. Co-operate" seeks to promote The Urban Co-op as a movement, a community, and a way of life for health-conscious individuals, in addition to being a retailer.

We have identified a target audience of health-conscious professionals aged 25-40 residing in Limerick City's urban areas who value ethical consumption and local products.

The digital marketing strategy will be implemented through a variety of platforms. First, we plan to use social media platforms that emphasise the local community. Content will include funding visibility, community stories, event marketing, food demonstrations, and sustainability advice. Second, we plan to employ content marketing, incorporating concepts such as "Cooking with the Co-op," which highlights seasonal recipes and user-generated content campaigns such as #MyCoopBasket. We also propose a monthly newsletter featuring user stories, recipes, and information about upcoming events to keep the community informed. Additionally, to attract high-intent visitors, we will focus on local search terms such as "organic food Limerick" and "local co-op." We will also work with Irish health bloggers, chefs, and sustainability advocates to increase our visibility and reputation.

The report also includes a detailed campaign calendar, budget allocations, and a clear control and evaluation plan. A variety of indicators will be utilised to evaluate success. This methodical approach ensures that all marketing initiatives align with our goals and support The Urban Co-op's long-term expansion.

Market & Company Analysis

The Urban Co-op operates as a social enterprise and a Company Limited by Guarantee (CLG), centring its value proposition on local, organic produce and community wellness.

Macroenvironment

We decided to undertake a PEST analysis to comprehensively examine the external factors that affect The Urban Co-op's corporate activities.

Political/Legal Factors

	Relevance
Government Organic Strategy & Funding	Ireland has a National Organic Strategy 2024-2030 aiming for 10% of land to be farmed organically by 2030. This creates a supportive long-term policy environment. Farmers and processors are incentivised through schemes like the Organic Farming Scheme and the Organic Processing Investment Grant, ensuring a steadier supply of organic produce. ^{1 2 3}
Direct Project Support	The Co-op has secured funding for market research into areas such as school-based procurement and ready-to-eat organic meals, indicating government support. ⁴
Co-operative and Local Enterprise Focus	The Urban Co-op's structure and focus on local supply chains align with initiatives supported by Local Action Groups and the LEADER programme, which prioritise community-led development and organic enterprises. ⁵
EU Regulation	Regulation (EU) 2018/848 standardises the high requirements for labelling, processing, and marketing of organic products, building customer trust in the Urban Co-op's core offerings. ⁶

Economic Factors

	Relevance
Consumer Spending Growth	Consumer spending is projected to rise by 2.9% in 2025. The Consumer Price Index (CPI) increased by 1.9% between Jan 2024 and Jan 2025. Overall grocery expenditure decreased by 3.4%. ^{7 8}
Real Wage Increases	With inflation easing and nominal wage growth projected to continue, households are experiencing a rise in income, making pricing of organic and local produce more accessible. ⁹
Inflationary Pressures on Food	Geopolitical conflicts can exert pressure on global supply chains, increasing the cost of imported food. This is a potential opportunity as it makes the locally sourced produce more competitive. ¹⁰

⁶ Gov.ie – Organic Farming

⁷ Ibec For Irish Business – Failure to effectively deliver necessary infrastructure biggest challenge to economic growth

⁸ Board Bia – Overview Ireland (ROI) Grocery Retail Market (March 2025)

⁹ Central Bank of Ireland – Quarterly Bulletin 2024:4 – Steady growth and lower inflation in the Irish economy, but geoeconomic risks are rising

¹⁰ PwC Quarterly Economic Digest – Q4 2024

Socio-Cultural Factors

	Relevance
Focus on Health and Wellness	The Urban Co-op's dual offering of an organic grocery store and a wellness hub directly addresses the increasing consumer emphasis on health, wellbeing and self-care. There is also an expectation amongst consumers that grocery stores will help them to make more environmentally friendly decisions. The Urban Co-op fulfils this expectation with their dual offerings. ^{11 12}
Growing Demand for Local and Organic Food	Sustainability stays a priority for Irish consumers. 60% of customers believe an unsustainable lifestyle is less socially acceptable than before. 43% of consumers base their purchasing decisions on the environmental impact of product packaging, and 78% of consumers value sustainability. ^{13 14}
Community and Ethical Consumption	The Urban Co-op's structure fosters a loyal customer base with people who are ethically motivated. This social enterprise model appeals to consumers seeking alternatives to large cooperations. ¹⁵

Technological Factors

	Relevance
E-Commerce and Digital Reach	The Co-op's offers online features such as Gift Vouchers, indicating an e-commerce presence. Maintaining a user-friendly website and efficient ordering experience is crucial. ¹⁶
Digitalisation	There has been a growing demand amongst customers for convenience which has driven the adoption of digital solutions. Grocery stores have started leveraging technology offering online platforms, mobile applications, home delivery, click and collect and more. ¹⁷
Supply Chain Optimisation	Technology for managing logistics and inventory is essential for developing the most efficient food supply chains. ¹⁸

Microenvironment

The Urban Co-op

The Urban Co-op was established in 2013 as a community-driven buying club and has since evolved into a local and organic grocery store, a wellness centre, and a place for education and community engagement. In 2019, it expanded and introduced the Wellness Hub to enhance its community support. Today it is a social enterprise and a Company Limited by Guarantee (CLG), open 7 days a week, focusing on sustainable, ethical, organic and wholefood products. As it is a CLG, it reinvests all surplus back into its mission and community.

Furthermore, a structured employee/volunteer system is in place to support the Co-op's service. The Co-op's business model aims to generate at least 90% of its budget through income, ensuring resilience and independence. Additionally, their

¹⁸ Irish Organic Association - The Irish organic sector's contribution to LEADER 2023-2027

financial capital is primarily derived from “Philanthropy of Crowds”, which is income from members and supporters. Lastly, a Pay Forward initiative was launched in 2024 to foster autonomy through membership growth.

Its core offerings include a community grocery store that sells certified organic fruits, vegetables, whole foods, dairy, and local meats, a wellness hub that offers spaces for rent, hosts classes, therapies, and workshops, and a community space for staff and volunteers.

The Co-ops customer base has over 2,500 members as of 2020. Mainly local residents and health-conscious shoppers. Additionally, they partner with programmes such as “Too Good To Go” to reduce food waste actively.

The Urban Co-op’s vision is “To serve as a model for the development of co-operatives in the Mid-west and further afield.” (The Urban Co-op Strategic Plan 2025- 2028). Their goals include developing a responsible food system, providing access to nourishing food, promoting good health and wellbeing, fostering economic resilience, empowering communities, and advocating for change through activism.

Their mission and purpose continue to be “To continue to develop a community grocery co-operative, wellness hub and education space for the benefit of its members, the wider community and the environment.” (The Urban Co-op Strategic Plan 2025- 2028)

The Co-op's core values, which underpin its mission and guide its work, are built on trust, sustainability, and community.

They envision proactively building a customer base and membership, as these are the core of The Urban Co-op concept. Furthermore, they hope to enhance their relationship and networks to help guide them in their goals.

Suppliers

The Urban Co-op is supplied by nine farmers, dairy producers, bakeries and other individuals providing them with the products they need. The complete list of suppliers is as follows:

1. New Leaf Urban Farmers
2. Hooked by Em
3. Jim Cronin
4. Cratloe Hills Cheese
5. Rigney’s Farm
6. Sean Condon
7. Crafted Crust
8. Lime Tree
9. Nourish by Nature

Competitors

The Irish grocery retail market is highly competitive, with major retailers dominating. The most significant competitors are those that compete on price and offer sustainable, local products.

Competitor 1: Major Discount Retailers (e.g., Lidl & Aldi)	
Products The Urban Co-op compete with	• Standard grocery items and essentials • Organic/free-from ranges • Seasonal and limited time offers • Some pre-packaged/minimal processing food items • Food security items
Other ways The Urban Co-op compete	• Price • Buying power • Investment in Irish Suppliers • Shopping Experience • Expansion

Competitor 2: Leading Conventional Supermarkets (e.g., Dunnes Stores, SuperValu, Tesco Ireland)	
Products The Urban Co-op compete with	• Fresh produce, especially Irish sourced • Deli/fresh food counters • Wholefoods/ Health-focused products • Goods where clear labelling and origin is important • Home delivery and click and collect
Other ways The Urban Co-op compete	• Convenience of online shopping • Loyalty Programmes • Quality Perception • Social/Community Focus

Competitor 3: Local Health Shops (e.g., Nature's Hand Castletroy)	
Products The Urban Co-op compete with	• Wholefoods and Bulk • Certified and Specialty Goods • Nature Health & Wellness • Local Producers • Ethical/Sustainable Brands
Other ways The Urban Co-op compete	• Expertise and Specialism • High-End Niche • Location & Convenience

Customer Markets

The Co-op's primary customer segment consists of value-driven customers who trust the Co-op's mission and seek alternatives to major suppliers, driven by a

belief in a sustainable economy. They actively seek fair pricing and ethical management. There is not just a customer but a member who is interested in the membership concept.

The secondary segment targets customers focused on wellness by offering healthy food options and wellness opportunities. They seek out spaces for social connection and value the Co-op's efforts to address social isolation and community well-being.

While focused on high ethical standards and quality, the customer market expects the Co-op to ensure fair pricing, suggesting the target audience values high-quality, ethical sourcing, but also requires a sustainable, affordable business model.

SWOT Analysis

Strengths	Weaknesses
• Strong Community and Member Base • Ethical and Local Supply Chain • Diverse Service Offering • Authenticity and Trust • Low Food Waste Initiative	• Volunteers Structure Reliance • Price Sensitivity • Location and Accessibility • Limited Capital for Projects • Limited Product Range/Supply
Opportunities	Threats
• Growth in Health & Wellness Focus • Rising Demand for Sustainable Consumption • Limerick Local Food Initiatives • E-commerce Expansion • Education and Workshops	• Competition from Supermarket Greening • Economic Downturn and Inflation • Supply Chain Disruption • Digital Competition • Loss of Key Personnel

Target Market

Profile and Demographic Characteristics

This marketing plan views health-conscious professionals between the ages of 25 and 40 who reside in urban areas surrounding Limerick City and value ethical consumption, local products, and convenience as the primary target audience. Students at nearby colleges between the ages of 20 and 25 who value local produce and sustainability and have an above-average income as are identified as the secondary target audience. The age of our target audience will influence our social media platform usage, content tone and channel selection for advertising. The difference in profession will affect the type of content consumed and the time of day they are most active online, or available for events.

Behavioural and Psychographic Characteristics

Digital and Online Shopping Behaviour

From the Central Statistics Office (CSO), Internet Purchases and Subscriptions: Household Digital Consumer Behaviour 2024:

- 85% of internet users purchased goods and/or services online in 2024.

From Deloitte Ireland: Digital Usage & Online Behaviours (2024):

- 47% of respondents use their smartphones to pay for goods and services in-store through digital wallets (up from 36% in 2023).

From Autofulfil: The State of eCommerce in Ireland 2024:

- 72% of respondents list convenience as the primary reason for shopping online, alongside saving time (64%) and saving money (52%).

From KPMG: Next Gen Retail Vol. 7. (2024):

- 62% prefer shopping in-store to see and feel products before buying.

Psychographic and Ethical Consumer Trends

From PwC Ireland: Voice of the Consumer Survey 2025:

- 64% of consumers cite price as a key consideration when choosing food.
- 57% are concerned about the health risks of ultra-processed foods.
- 64% use at least one app or device to monitor their wellbeing.
- 42% are willing to pay more for locally produced food.
- 37% are willing to pay more for sustainable food production.

From Consumer Council: Consumer attitudes to the circular economy (2024):

- 69% of respondents already buy locally produced food from local businesses, with cost being cited as the most popular reason for not doing so (54%).

From Bord Bia Thinking House: Frequency of Buying Locally Produced Food:

- 68% of respondents buy locally produced food weekly.
- Majority respondents expect to buy more locally produced food in the future.
- Buying locally produced food is widely seen as supporting the local economy.
- Buying locally produced food is seen as better for the environment.
- Mixed views on what “locally” produced food is, but the most dominant view is that it is produced by small companies or people in the local area.
- Factors such as knowing local companies from farmers’ markets, store displays, information on packaging, and the view that local products taste better are essential when consumers choose to buy locally produced food.

Target Personas

We’ve identified the following personas to represent customers of the Co-op:

Clara
O’Connell

General Information

Age: 35

Location: Suburban Limerick

Occupation: Senior Tech Analyst (Hybrid)

Income: €75,000+ (High disposable income)

Search Queries:

“organic vegetable box subscription limerick”

“highest rated local food delivery”

“carbon footprint local beef”

“quick health diner recipes”

Primary Target Audience

Lifestyle

- Extremely busy, high-stress work-life
- Values efficiency and high-quality, convenient solutions
- Invests heavily in health tech
- Enjoys meal kits or high-end grocery delivery to save time

Personal Traits

- Data driven
- Decisive
- Health- and Sustainability-focused
- Organised
- Premium shopper

Goals

- Find a reliable source for high-quality, organic food she can order quickly
- Minimise decision fatigue around food shopping and meal planning
- Use her spending to support local and ethical businesses

Challenges

- Lack of time to shop in person
- Wants to avoid excessive packaging
- Needing a clear, science-backed justification for premium-priced goods

Digital Behaviour

Device:

Uses a high-spec laptop for work and a premium smartphone for personal life.

Shopping:

Regularly uses grocery delivery, click and collect and subscription services.

Social

Uses Instagram, sparingly on TikTok, actively uses health & wellness, productivity and planning apps

Content

Prefers concise, data-rich content

9

Finn Doherty

General Information

Age: 21

Location: Student Accommodation in Castletroy

Occupation: Student (part-time job in hospitality)

Income: €10,000

Search Queries:

"student meal on a budget"

"co-op student discount"

"zero waste tips"

Lifestyle

- Social, budget-conscious, often cooks for housemates
- Focused on personal values and making a difference
- Attends campus events and socialises mostly offline but researches everything online

Goals

- Lower his cost of living while maintaining ethical spending (buying in bulk)
- Find brands verifiable, authentic sustainable practices
- Participate in local community projects

Personal Traits

- Idealistic
- Frugal
- Social
- Highly engaged in environmental issues
- Digital native

Challenges

- High cost of ethical and sustainable food options
- Needing a large amount of product for a lower unit price
- Getting to a store

Digital Behaviour

Device	Shopping	Social	Content
His smartphone is the sole digital tool	Rarely shops online for groceries but will search for deals/coupons before visiting the store	Heavy user of TikTok, Instagram and Reddit	Prefers short, authentic video content

Buyer Journey Map – Clara O'Connell

Stage	Awareness	Consideration	Decision	Retention	Advocacy
Goal	Realise the need for a better, time-efficient grocery solution	Evaluate local ethical suppliers against convenience and price	Commit to a regular purchasing pattern (subscription/weekly shop)	Make the Co-op her primary, trusted food source	Promote the Co-op to her social and professional network
Customer Action	Reads a health blog post about the benefits of local/organic food	Searches online for "organic food delivery limerick", compares The Urban Co-op's website to a major supermarket	Places her first online order for a mixed vegetable box	Automatically receives her weekly order, attends one of the Wellness Hub workshops	Writes a positive Google review mentioning the produce quality
Touchpoints	Instagram Ad, Google Search, Personal Calendar	The Urban Co-op Website, Competitor Websites, Local News Article	E-Commerce Platform, Delivery/ Click & Collect Point, Confirmation Email	Weekly Delivery, Customer Service/ Store Staff, Member Newsletter	Online Review Platform, Word-of-mouth, Returning Packaging
Emotion	Frustrated, Curious	Analytical, Relieved	Excited, Anxious	Satisfied, Delighted	Proud, Connected
Pain Points	Time Wasted on low-value chores, Information Overload	Uncertainty of Quality, Cost Barrier, Logistics Clarity	Website Friction, Delivery Window	Inconsistent Stock, Location Friction	Lack of Digital Sharing Tools, Negative Feedback
Opportunities for The Urban Co-op	Run Targeted Social Ads highlighting save time, get quality	Create a sourcing transparency page with farmer profiles and quality guarantees	Offer a busy professional subscription box	Implement a premium member priority chat/SMS line for quick customer service queries	Develop a Referral Program

Business Initiatives

The Urban Co-Op aims to build and secure a resilient, inclusive, and sustainable community food system in Limerick, while increasing membership, awareness, and sales through strong digital engagement. We will pursue the following key business initiatives in 2026:

Grow Digital Membership and Awareness

Over the next 12 months, we will execute a full-funnel marketing campaign that targets potential customers at every stage of their buying journey. This will help to position The Urban Co-op as Limerick's hub for sustainable living. The focus remains on brand storytelling through social media, influencer partnerships, and SEO-optimised content that highlights The Urban Co-op's people, values, and wellness offerings. To achieve this, we will launch our social media campaign, #CoOperateLimerick, showcasing real members, local suppliers, and volunteers to build authenticity and trust. Additionally, we will partner with four local micro-influencers to create authentic sponsored content and drive traffic using unique promo codes. We will focus our SEO efforts on local search terms, such as "Organic Food Limerick", to attract high-intent visitors and increase organic website traffic. The goal is to increase membership by at least 25% and achieve 30% growth in social media following. Success will be measured by membership sign-ups, social media growth, likes, comments, shares, saves, and increased organic traffic and keyword rankings.

Drive Sales Through Community-Based E-Commerce

We propose implementing a robust digital sales strategy that leverages the new website to create a seamless omni-channel experience, converting online engagement into tangible sales and registrations. This is a core business initiative that directly impacts revenue and profitability.

Key actions begin with updates to digital payments and order tracking, which are essential for a smooth user experience and help reduce cart abandonment rates while building customer trust. At the same time, we will redesign the E-Commerce landing page to focus on clear product categorisation, high-quality visuals, and a streamlined checkout process to maximise Conversion Rate Optimisation (CRO).

To increase the overall Average Order Value (AOV), we will introduce Member-Exclusive Online Bundles such as monthly vegetable subscription boxes. These strategically priced kits will be available only to members online, incentivising both membership and higher transaction prices. We will also introduce a Loyalty Program with different stages to gamify the shopping experience and increase

customer engagement. Finally, we will implement Performance Marketing Integration to drive targeted traffic. This included optimising the site for SEO, running targeted Google Ads (SEM) focused on local keywords, and deploying Geotargeted Display Ads to reach specific audience segments in Limerick City and Castletroy. All campaigns will be meticulously tracked using Website Analytics, specifically Matomo, to ensure data accuracy and compliance with privacy regulations.

The primary goal of this initiative is to boost online orders by 40% and increase average order value by 5% within the 2026 timeline. Success will be measured through quantitative metrics such as online transaction numbers, total revenue from the e-commerce channel, AOV, Repeat Purchase Rate and Conversion Rate on the dedicated landing page.

Strengthen Community Engagement Through Wellness and Education

We plan to develop digital and in-person community events that leverage the Co-op's dual offering as an organic grocery shop and a Wellness hub. Our goal is to strengthen community ties and directly address the target audience's high concern for health, well-being and self-care.

Key actions within this initiative include launching monthly community events, such as workshops and wellness classes, including meditation, patchwork, and quilting classes, both digitally and in person. Additionally, we aim to host quarterly offline events, such as Spring into Sustainability, featuring mini farmers' markets, cooking demonstrations, yoga classes, and sustainability workshops. All our events will be promoted digitally using tools such as Canva Pro and QR codes.

Our goal is to boost event attendance by 25% to enhance community bonds and realise a 10% increase in actual event participation. We also plan to grow the number of repeat shoppers and attendees by 15%, utilising loyalty programs and community engagement. Success will be tracked through online registration data, attendance figures, engagement metrics on promotional content, and feedback surveys.

The Campaign

Campaign Slogan: Support Local. Eat Well. Co-operate

Campaign Overview: Through this integrated digital and community initiative, The Urban Co-op's role as Limerick's leading hub for sustainable living will be reinforced by bringing together its three core pillars: local food, wellness, and community education, all delivered in one unified message.

Campaign Objectives

1. Awareness: Grow our social media following by 30% to expand reach.
2. Engagement: Increase event attendance by 25% to strengthen community ties.
3. Conversion: Boost online orders by 40% and increase average order value by 5% to drive revenue.
4. Retention: Increase the number of repeat shoppers/event attendees by 15% through loyalty schemes and community building.

EARTHY COLOR PALETTE

Figure 1 – Campaign Colour Palette

1. Digital Story Telling on Instagram and TikTok

Instagram and TikTok are the two primary social media platforms that support The Urban Co-op's marketing and community outreach efforts because they have the highest reach among our target demographics. Both platforms are working to make The Urban Co-op the go-to destination in Limerick for sustainable living, ethical food sourcing, and wellness culture.

Instagram serves as the brand's storytelling and trust-building channel, with content formats including high-quality static posts and longer reels that support visual consistency and detailed narrative development. It conveys the Co-op's identity through high-quality, visually consistent content that represents its sustainable values and community roots, establishing a premium, reliable and authentic brand image. It's not about making quick sales, but about forming emotional connections as the Co-op's business model thrives on loyalty and membership.

Figure 2 - Mockups of Instagram Reels and Posts

Regular reels, roughly 30 to 60 seconds long, will feature stories about the Urban Co-ops supply chain ("farm-to-table"), stories about local farmers and suppliers ("meet your grower"), members and volunteers ("why join and co-operate") and zero-waste initiatives. We choose to focus on human-centred topics because they

directly reinforce the Co-ops' values of transparency, community, and sustainability.

Figure 3 - Mockup of Seasonal Recipe Carousel

Seasonal recipes, local partnerships, and sustainability education will be featured in carousels, as they allow for multi-image, instructional, or educational content that encourages users to spend more time on the post and increases the 'Save' metric, indicating high value. We will also include shoppable links to products to direct customers directly to the Co-ops website. Tools like surveys, live Q&As, and behind-the-scenes footage will be represented as stories. Additionally, we plan to create branded lenses using AR to enhance user engagement, leveraging an emerging technology to boost brand awareness and introduce a playful, interactive experience.

Figure 4 - Mockup of an AR lens

All content will be mobile-first with strong visual hooks, captions for sound-off viewing, and a clear brand voice, as most social media consumption occurs on mobile devices with the sound off. Analytics and scheduling will be conducted using Meta Business Suite and Instagram Insights, with Canva Pro supporting design consistency.

Weekly tracking of reach, saves, engagement rate, and website link clicks will inform creative direction and publishing schedules, as these KPIs directly measure awareness, content value, community

interaction, and conversion intent, enabling data-driven optimisation.

TikTok is already used as a search engine that helps younger people find new things. We're going to use it to promote the Urban Co-op to a large audience because TikTok's algorithm enables rapid, massive reach, regardless of follower count. Staff profiles, community challenges such as the hashtag challenge #MyCoopBasket, local events, and creative sustainability demonstrations will be in short videos, as these formats are dynamic, humanising, and align with the platform's content style. Each post will follow well-established practices to maximise views and increase the chances of triggering the 'For You Page' algorithm. The aim is to capture attention within the first few seconds, utilise trending sounds

Figure 5 - Mockup of TikTok

and on-screen text, and conclude with a powerful call to action to combat short attention spans, leverage algorithmic preference, and drive measurable outcomes. To achieve this, we will observe engagement rates, top-performing content, and audience sentiment using Analytical tools such as Instagram Insights and TikTok analytics to determine current trends. We will adjust our strategy in response to these trends. For editing, CapCut and TikTok Creative Centre are planned to be used as they are industry-standard, platform-native editing tools. Metricool analytics will guide tone, timing, and creativity. TikTok aims to increase awareness and engagement by encouraging users to visit the store, join the membership program, or attend community events, as these are the Co-op's primary conversion goals. We plan to utilise TikTok's Full-

Screen In-Feed Ads to drive awareness and engagement, ensuring guaranteed reach, targeted promotion, and direct conversion pathways. All campaigns will be cross-platform and reusable to maximise efficiency, minimise production costs, and enhance content ROI. A single long-form video can be an Instagram Reel, TikTok clip, or story highlight, with a consistent narrative, to streamline the content workflow and maintain brand consistency. Later, Metricool will automate and schedule content to post at optimal times, simplifying analytics. A monthly content schedule will combine planned storytelling with real-time community updates to coordinate campaigns by subject and goal. The strategy must be current so that the Co-op can experience awareness and engagement peaks around seasonal or cultural events, tapping into existing high-traffic conversations and consumer buying cycles.

All social media engagement data will be stored in the company's CRM to centralise customer data for unified journey tracking. HubSpot is the most suitable CRM platform because it can grow with your business, automate tasks, and work well with Meta and TikTok. Membership, email marketing, post-event follow-ups, and loyalty programs will be managed by the CRM, linking social media effectiveness to commercial results to measure the true ROI of our social media efforts. Instagram and TikTok analytics will send data directly to our HubSpot marketing dashboards, where we can segment the audience by interests and behaviour, enabling granular audience analysis and sophisticated campaign personalisation.

Automated workflows will send personalised email campaigns or event reminders, and participation feedback will be returned to the content calendar to help improve strategy. Effectiveness will be evaluated based on marketing results. Reach, impressions, and video views will serve as standard metrics for measuring

awareness and quantifying audience exposure. Comments, shares, saves, and watch time will measure engagement as these indicate content value and audience interaction depth. Website visits, event registrations, and membership sign-ups will be measured as conversions, as these are the ultimate business-value actions. Message tone and community feedback will be used to gauge sentiment and brand perception, and to assess emotional connection. These metrics will help us understand which materials and topics receive the most engagement, enabling us to make informed future changes. To handle negative feedback, we strive to maintain professionalism and empathy when responding to complaints or criticism, protecting the brand reputation and demonstrating our commitment to customer service. We plan to provide prompt resolutions for issues and direct users to customer support as needed.

2. User-Generated Content on Instagram and TikTok

Our strategy for User-Generated Content (UGC) is critical for driving authentic engagement and expanding the Co-op's reach by leveraging the community itself.

The primary initiative is a continuous social media challenge that encourages members to actively share photos or videos of their weekly Co-op basket, home-cooked meals made with Co-op ingredients, or their personal zero-waste tips on Instagram and TikTok. All shared content must utilise the dedicated campaign hashtag #MyCoopBasket. This approach not only generates organic content but also visually demonstrates the real-world application of the Co-op's values. To maintain participation and reward loyalty, monthly challenge winners will receive a 50€ Co-op voucher.

Furthermore, the strategy includes capitalising on spontaneous product value demonstrations and driving organic interest. The overarching goal is to effectively drive organic engagement, boost reach through shared content and visibly showcase genuine community participation.

3. Community Activation and Offline Engagement

We propose hosting community activation and offline events to strengthen community connections and attract new members through experiential events. We plan to promote these initiatives digitally across our social media channels to bridge the gap between the Co-op's digital and physical communities. This will build

Figure 6 – Mockup of UGC

Figure 7 – Instagram Mockups 1 & 2

upon a quarterly outdoor event series hosted in high-traffic locations, such as the Co-op's Wellness Hub, People's Park or near the University of Limerick.

The series will feature three formats:

- Pop-up Mini Farmers' Market: We will establish pop-up markets featuring local suppliers or partner with existing farmers' markets to effectively reach established audiences and actively promote local, ethically sourced produce.
- Live Cooking Demonstrations: These short live demonstrations will feature local chefs or influencers who will use Co-op ingredients. The demonstrations will be paired with tasting sessions to drive interest and sales.
- Outdoor Wellness Sessions: We will offer outdoor yoga and other wellness sessions that promote community wellbeing and are designed to attract health-focused audiences.

A consistent visual identity is critical for event promotion. The mock-up event poster for the Mini Farmers' Market utilises the brand's natural colour palette to clearly reflect The Urban Co-op's sustainable and community-focused ethos. These natural tones were chosen to convey calmness, authenticity, and alignment with the brand's wellness values.

Figure 9 - Event QR Poster

The primary visual assets were then adapted into two distinct Instagram post mock-ups: one featuring the designed event poster and another using a realistic lifestyle image of a local market scene to enhance relatability and community connection. All designs adhere to a mobile-first display standard, featuring clean typography and minimal overlays to maintain visual harmony and reinforce the campaign slogan "Support Local. Eat Well. Co-operate."

Figure 8 - Instagram Mockup 3

Furthermore, a QR code poster was created for strategic placement in high-visibility areas across the city. This tool encourages immediate sign-ups by scanning the code and ensures brand consistency while evoking trust, warmth, and a sense of community.

These events are vital for bringing the Co-op's community values to life. Given that wellness and local connection are central pillars of the Co-op's brand identity, these real-world experiences facilitate deeper personal connection, encourage active involvement, and instil a stronger sense of belonging among participants.

The ultimate objective is to measurably strengthen offline engagement while successfully attracting new members and collecting sign-ups via digitally linked QR codes. QR codes linked to Google Forms will enable seamless sign-ups and attendance tracking, integrated with HubSpot CRM for follow-ups. Eventbrite will be used to manage wellness workshops and community events, while Google Workspace will facilitate internal coordination and file sharing. The total estimated cost for these campaign technologies is included under Offline Integration & Tools in the budget spreadsheet.

4. Influencer Partnerships

We are planning to work with four Limerick-based influencers in the areas of food, fitness, and sustainability to create authentic sponsored content that fits with The Urban Co-op's values. The Urban Co-op is strong because it has strong ties to the community and makes a difference in the area. These are values best represented by local voices people trust and who really support its mission of sustainability and well-being. Working with mid-tier and micro-influencers helps us connect with people in the area who care about living ethically and supporting local food systems. Additionally, focusing on local, values-driven creators will deliver stronger credibility, cost efficiency, and meaningful community engagement.

We plan to create promo codes for each influencer, which they can share with their followers to increase conversion rates from strangers to customers. Furthermore, we plan to utilise product seeding by sending suitable influencer taster boxes to try The Urban Co-op's products and create unboxing videos.

Our suggested Influencer rates are estimates based on average Irish influencer rates, supported by data from Pluto/Core (2024) and Influencer Marketing Hub (2025). Our suggested range of €100 to €1,200 per post, depending on audience size and engagement, aligns with what creators typically charge for local, values-driven collaborations. On average, creators charge about €100 for every 10,000 followers.

Influencer	Followers	Alignment/Focus	Proposed Activities	Estimated Cost
Aoife McNamara (@aoifemcnamarax)	41k	Ethical Fashion & Sustainability. Strong national/regional visibility Post regularly, receiving significant likes and comments Her pace is steady, showing long-term growth and loyal involvement	Co-hosting sustainability workshops, ethical fashion events, slow living community projects	€500 to €1,200 per post or partnership
Eoin Sheehan (@eoinsheehan / @countrymunchfoodco)	~27K	Local Food & Nutrition. Local chef focusing on local, nutritious ingredients. High engagement metrics, especially for reels about recipes and cooking lessons. His subscriber growth is consistent and natural.	Reel recipes demonstrating affordable Co-op meals, food events.	€400 – €800 per partnership.

Sophie Atallah (@sophie_atallah_coaching)	~5K	Wellness & Mindfulness. High engagement in self-care community. She posts often and at a steady pace. Her audience connects with her through tone and style of her posts.	Live mindfulness sessions, local health product demos, create short videos, or host wellness workshops in stores.	€150 – €300 per content set.
Colum McGrath (@radiocolum)	~4K	Local Food Culture & Humour. High engagement with slow but steady growth, community-focused content. He showcases the best of local food culture, cafes, and small businesses. His regular posting and sincere tone make people feel like they can trust him and get to know him.	Fun video collaborations, increased local visibility.	€100 – €250 per content set.

5. Brand Website

Strategic Rationale: Optimising the Digital User Experience

Our research indicates that a high-performing website is the foundational asset for a successful digital marketing strategy. To align with key objectives, sales and brand activation, the current website requires a strategic redesign. This is crucial for three reasons.

First, a relevant and user-friendly website is essential for high performance in pay-per-click campaigns, ensuring the best possible Ad Quality Score and maximising return on ad spend (ROAS). Second, the primary goal of the redesign is Conversion Rate Optimisation, increasing the conversion of visitors into paying customers and loyal members, which necessitates intuitive navigation and clear calls to action. Third, the redesign addresses the needs of our target audience, who value convenience and time-saving, by offering a fully functional e-commerce platform.

The tool chosen to measure and optimise this new digital presence is Matomo, a privacy-first web analytics platform. Given The Urban Co-op's strong ethical focus on local sourcing and community trust, Matomo's approach of offering 100% data ownership and guaranteed GDPR compliance is strategically aligned with the brand's core values. Furthermore, by opting for the cost-effective Matomo Cloud plan, we ensure to stay within budget while benefiting from unsampled, accurate data and powerful behavioural tools like Heatmaps and Session Recordings, which will be essential for continuous CRO on the e-commerce platform and member portal.

Figure 10 – Mobile Version of the website

Figure 10 – Mobile Version of the Landing Page

Proposed Website Redesign & Functionality

We propose a strategic overhaul of the website to serve as the central digital hub. This new design will feature an integrated e-commerce platform, enabling the complete inventory to be shopped online and directly addressing the target audience's need for convenience, thereby opening a new revenue stream. The entire design will be mobile-compliant and fully responsive, reflecting the reality that most of our target audience accesses the internet and searches on their smartphones.

Crucially, the site will introduce a Click & Collect feature, bridging the digital and physical experiences and catering to consumers who value the convenience and time-saving aspects of online pre-ordering.

To drive customer loyalty and value, we will implement a dedicated members portal. This portal centralises everything and will include member benefits and a digital loyalty card. This card will feature a QR code that can be added to a digital wallet and scanned in-store to activate mobile coupons and collect points. Additionally, member benefits will include unique monthly collectable discounts, as well as the management of a loyalty points system and a referral program. Members can collect points by attending events, purchasing items or volunteering. Members can redeem their points for discounts or free products. We will also introduce a new feature on the member portal that shows customers the percentage of their profile that is complete and which steps are still missing. This will encourage members to complete their profiles, helping us gather all the necessary data to continually improve our marketing strategy based on our audience's needs. This functionality is designed to boost member retention and, specifically, encourage word-of-mouth marketing.

Furthermore, integrating an online event booking and event calendar enables visitors to view upcoming events and book workshops instantly, streamlining the buyer journey for experiential offerings and maximising the use of the wellness

Figure 11 - Redesigned Landing Page

hub. The introduction of a prominent “Join Community” CTA is designed to directly increase the conversion rate from visitors to engaged community members. The overall goal is to boost member retention and repeat purchases by leveraging digital convenience and presence.

6. Email Marketing

Mailchimp was chosen for its user-friendly automation, templates, segmentation, re-engagement automations, audience tagging, dynamic content, and analytics, all without requiring technical setup. All emails are mobile-compliant. We will also apply A/B testing for every email campaign to ensure we reach the most members.

Flow 1: Welcome Series - “Your First 5 Days with The Urban Co-op”

Figure 11 - Footer Mockup

The first email will be sent immediately. The following emails will be sent every few days. Day 0 captures attention at the moment of sign-up. Day 1 builds on early motivation. Day 3 reinforces engagement without overwhelming the user, and Day 5 provides a final prompt within the critical first-week period when habits and retention patterns form. Its purpose is to onboard new members, build trust, set expectations, and encourage early platform activity.

Figure 12 - Email Mockup Day 0

Day	Email Subject	Purpose	Key Content Elements
Day 0	“Welcome to The Co-op - here’s what to expect”	Warm greeting, set tone, invite next step	Welcome message, mission/values, key benefits, link to member portal, ask them to complete profile or tell us preferences
Day 1	“Meet your community & benefits”	Show what they get, compel them to explore	Highlight features, tools, resources, FAQs, link to explore member dashboard

Day 3	"How to get the most out of The Co-op"	Educate, reduce friction	Tips, usage guides, how to access events, connect with local chapter, how to contact support
Day 5	"Next steps & what's coming"	Prompt engagement/action	Invite to an upcoming event, ask to follow on social, encourage first contribution/participation, feedback request

To measure the success of this newsletter, we will use metrics such as the open rate, click-through rate, completion of first key action, unsubscribe rate, and early engagement drop-off.

Flow 2: Monthly Newsletter - "Your Co-op News"

This newsletter maintains consistent communication across the community, highlighting important events and happenings at The Urban Co-op. Its purpose is to reinforce community identity, share updates, and drive event participation.

This newsletter will feature a standardised template including local stories, upcoming events, a member spotlight, and useful resources to drive engagement.

This newsletter will be sent out monthly, typically in the first week of each month, to all members who have signed up to receive it. Signing up is the trigger for this email campaign. Segmentation can be applied to local chapters. To measure the success of this newsletter, we will use metrics such as the open rate, click-through rate, click depth, event signups, share/forward rate, and subscriber changes.

Flow 3: Cart Abandonment (Online Shop)

This flow is sent to customers who leave items in their carts without completing checkout. The trigger occurs when a visitor adds an item to a cart or initiates checkout but doesn't complete the purchase within 1 hour.

Delay	Email Subject	Purpose	Key Content Elements
1 hour	"Did something catch your eye?"	Gentle reminder	Display cart items with images, descriptions, and return-to-cart CTA
24 hours	"Still thinking it over?"	Encourage reconsideration	Product info, social proof, shipping reminders
72 hours	"Last chance — your cart is waiting"	Final nudge	Optional discount, benefits reminders, urgency cues

To measure the success of this newsletter, we will use metrics such as the recovery rate, revenue recovered, open and click rates, conversions, and the opt-out rate. We need to be cautious with cadence, avoiding spam and keeping messages concise and helpful.

Flow 4: Reactivation Campaign (for inactive members)

Inactive members are identified after three to six months of inactivity, as indicated by no opens, clicks, or logins. This flow reminds them of what they're missing and invites them back. Its purpose is to bring dormant members back into active participation. To measure the success of this newsletter, we will use metrics such as the reactivation rate, open/click performance, conversions, and the unsubscribe rate.

Stage	Timing	Subject	Purpose	Key Content Elements
First reactivation	Immediately when flagged	"We miss you! Here's what's new"	Highlight new features and invite return	Recent updates, upcoming events
Second nudge	1 week later	"Still here for you. Check this out"	Provide additional value	Testimonials, top content
Final appeal	2 weeks later	"A gift to welcome you back"	Offer incentive, benefit, or bonus	Survey on how to improve, overview of benefits for members
Goodbye/re-permission	1 month later	"Are you sure you want to miss out?"	Ask to stay subscribed	Direct link to member portal

7. Google Ads

This section outlines the proposed use of Google Ads, SEO and GEO-personalisation to increase the Urban Co-op's digital visibility and attract customers in the Limerick area. The focus is on geo-targeted, proximity-based advertising, ensuring that ads appear to users who are nearby and actively searching for sustainable food, wellness, and community experiences. The objective is to appear in both sponsored search results and AI-generated overviews. This will ensure that The Urban Co-op ranks as a trusted, local and ethical brand.

The campaigns will primarily utilise Google's Performance Max (PMax) campaigns to drive online sales and maximise in-store visits, alongside highly targeted Search campaigns.

Because people often search on their phones while already near the store or on the move, proximity-based ads ensure we appear at the exact moment they are

Figure 14 - Result for 'Wellness Limerick'

Figure 15 - Result for 'Local Co-op'

Figure 13 - Result for 'Organic Food in Limerick'

looking for local organic food or wellness options. SEO and GEO optimisation will help the website appear in AI Overviews. The site will utilise natural, intent-based language, structured local data (including address, map, and events), and location references to enhance relevance.

To complement the paid search strategy, this plan incorporates a dedicated Organic Search Engine Optimisation (SEO) content strategy focused on building the Co-op's online authority. This will be achieved by aligning content production with Google's E-E-A-T (Experience, Expertise, Authoritativeness, and Trust) Model. The content strategy will centre around two main pillars: Local Sourcing and Wellness. This high-value, unique content will be the focus of the on-page SEO effort, targeting long-tail, informational keywords. Concurrently, off-page SEO efforts will be implemented by encouraging local food bloggers and community groups to link to this original content, further cementing The Urban Co-op as a trusted, expert source of information in the Limerick community and establishing the required domain authority for long-term organic visibility.

To ensure The Urban Co-op's ads appear near the top of Google search results, using the right keywords is essential. They help us reach people who are already looking for organic groceries, wellness activities, or local events. At the same time, defining negative keywords is just as important so our ads don't appear in searches that are irrelevant or misaligned with the Urban Co-op's brand. It also increases efficiency by preventing wasted spend on unrelated searches and improving overall ad relevance. We will structure our keywords to control spend and increase relevance.

Primary keywords	Secondary keywords	Long-tailed keywords	Negative keywords
Organic Food Limerick	Organic groceries	Organic veggie shop in Limerick	Fast food
Local co-op	Local food store	Where to buy local produce in Limerick	Free nationwide
Zero-waste shop	Refill store	Zero-waste grocery near me	Single use, Plastic
Wellness Limerick	Yoga class Limerick	Beginner yoga classes UL area	Injury, Gym
Events Limerick	Community Workshops	Family-friendly events Limerick	Wholesale
Click & collect	Grocery pick-up	Click & Collect organic groceries Limerick	Slow packing, Nationwide Delivery
Sustainable Groceries	Eco-friendly food	Best sustainable groceries Limerick	Bulk food

Additionally, we will implement exact, phrase, and broad keyword matches to not miss any search results and to include vague or misspelt searches.

These include:

Organic Food Limerick (Exact Match), "Organic groceries" (Phrase Match), sustainable shop Limerick (Broad Match), Zero-waste shop (Exact Match), "Refill store" (Phrase Match), Zero-waste grocery near me (Broad Match), Wellness Limerick (Exact Match), "Yoga class Limerick" (Phrase Match), Family-friendly

events Limerick (Broad Match), "Click & collect organic groceries Limerick" (Phrase Match), "Co-op near me" (Broad Match).

Sponsored posts appear when our ad rank outperforms others. Ad quality depends on click-through rate, relevance, and the landing page. Landing pages must load quickly, be mobile-friendly, and closely match the ad text. A strong landing page not only enhances the user experience but also reduces advertising costs, as Google rewards relevant, high-quality pages with lower click costs. A key component of improving Ad Quality and Ad Rank will be the use of Ad Extensions to provide additional value and multiple points of contact. Each page will contain clear CTAs such as "Join Now" or "Shop Local."

Our main key performance indicators include a click-through rate above 4%, a 40% increase in online orders, a 25% rise in event registrations, and a Quality Score of 8/10. Additional metrics include a Target Cost Per Acquisition (CPA) of €5.00 for online orders, and a minimum of 100 estimated Store Visits tracked from Performance Max campaigns.

Paying for Google Ads and SEO ensures the Co-op appears when people locally search on their phones, combining proximity-based advertising, strong landing pages, and AI-ready content to drive digital engagement and in-store visits.

To maximise Return on Ad Spend (ROAS), the annual Google Ads budget should be allocated based on known seasonal retail and organic consumption trends in Ireland. The overall approach will be to invest heavily in months where demand is naturally high or when key internal initiatives are running. The proposed monthly breakdown is as follows:

Month	Proposed Budget Allocation	Rationale for Allocation
January & February	Higher (€6,000 €3,000/month)	Post-holiday "Healthy Start" and New Year's Resolution effect. Increased consumer focus on health, detox, functional foods, and joining fitness/wellness classes.
March & April	Lower (€3,000 €1,500/month)	Traditional quieter retail period after the initial health drive and before summer. Budget focus shifts to low-cost maintenance and testing new membership-focused ad copy.
May, June & July	Highest (€10,500 €3,500/month)	Peak Irish growing season for fruits and vegetables, driving consumer interest and online searches for 'seasonal food' and 'local organic' options.
August	Medium (€2,000)	Holiday period, some customers travel. Maintain key Search and Local campaigns to capture remaining local shoppers.
September & October	Higher (€6,000 €3,000/month)	Back-to-School/Routine return, increasing regular grocery shopping. Historically a period of increased industry-wide organic marketing campaigns. Focus on new Autumnal produce and 'comfort food' recipes.
November	Medium (€2,500)	Pre-Christmas holiday build-up. Focus on high-value gifting (e.g., hampers, specialty items) and member sign-up promotions.
December	Lower (€1,500)	Focus shifts to in-store experience and immediate, short-term needs. Online advertising is scaled back to a maintenance level to avoid high auction competition during the primary festive rush.

Total: €31,500

Scheduling

Social Media (Instagram & TikTok)

Activity Category	Specific Item	Frequency
Digital Storytelling	Daily Instagram Stories	Daily
	Instagram Reel (educational/BTS)	3 times per week
	TikTok Video (trending audio/challenge)	3 times per week
	Instagram Carousel Post (recipes/tips)	2 times per week
UGC/ Engagement	UGC Content Reposting	Daily/Ongoing
	Member Spotlight	Weekly
	UGC Contest/Challenge	Monthly
Promotion/ General	General Posting Schedule	Daily posts/stories
	Live / Q&A Sessions	Monthly
Influencer Strategy	Influencer Identification and Vetting	Once after hiring
Influencer Content Collaboration	Influencer-led Content (recipe creation, reviews, etc.)	Quarterly

Email Marketing

Activity Category	Specific Item	Frequency
Automations	Welcome Series (New Members)	Triggered immediately upon sign-up
	Cart Abandonment Emails	Triggered shortly after cart abandonment
	Reactivation Campaigns	Triggered after a period of inactivity
Newsletters	Monthly Newsletter	Once a month
	Special Offers/Discounts Email	As required for promotions
Loyalty Program	Loyalty Program Communications	Ongoing/As required for rewards updates

Community Activation & Offline Integration

Activity Category	Specific Item	Frequency
Community Events	Educational Workshops (e.g., Cooking, Zero-Waste)	Monthly
	Pop-Up Tasting Stations (In-store)	Monthly (to drive foot traffic)
Major Event	Spring into Sustainability	Quarterly
Promotion	Digital Signage to Promote Digital Channels	Permanent setup/Ongoing

Website Updates

Activity Category	Specific Item	Frequency
Events	Adding upcoming events	Monthly/ as needed
Members Portal	Adding new discounts, benefits, including new features from feedback	Ongoing
Landing Page	Updating Information (testimonials, upcoming events, new products, etc.)	Monthly

Budget

Category	Tool/Platform	Description	Estimate Price	Rational
Digital Media (Ads)	Instagram Ads	Paid media and organic social boosting for events and promotions during high-engagement periods	€8,000 / Year	Maximises reach during key promotional, tapping into high-traffic conversations.
Digital Media (Ads)	Targeted Google Ads (Search/Display)	Running targeted Google Ads (SEM) focusing on local search terms ('Organic Food Limerick') and deploying Geo-targeted Display Ads in Limerick City and Castletroy.	€31,500 / Year	Critical for attracting high-intent visitors and achieving the 40% boost in online orders. Appearance is crucial when people search locally on their phones
Digital Media (Ads)	TikTok's Full-Screen In-Feed Ads	Used to drive awareness and engagement, ensuring guaranteed reach, targeted promotion, and direct conversion pathways.	€8,000 / Year	Targets the audience and aligns with the 30% social media following growth objective.
Analytics & Reporting	Google Analytics 4	It tracks website traffic, user behaviour and conversion paths stemming from organic search results.	FREE	Essential for measuring SEO performance. The resulting data is critical for understanding which SEO efforts are successful.
Deployment & Tracking	Google Tag Manager & Keyword Planner	GTM allows to quickly and easily deploy and manage tracking codes without needing constant developer assistance. It also helps identify keywords.	FREE	Crucial for efficient implementation. This ensures accurate and comprehensive data collection for SEO and overall marketing.
Content Production	Video production, photography, graphic design, copywriting (Internal/Freelance)	Creation of assets for Digital Storytelling (Instagram/TikTok), seasonal recipes, and website visuals.	€2,000 / Year	Essential for maintaining the warm, authentic, inclusive visual style and content quality, which drives engagement.
Content Production	Paying farmers, suppliers for partaking in videos (Talent Fees)	Compensating local suppliers for their time and stories as part of the #CoOperateLimerick social media campaign.	€1,000 / Year	Supports brand storytelling through authentic content and highlights the Co-op's values of local sourcing and trust.
Content Production	CapCut and TikTok Creative Centre	Editing software for short-form, authentic video content for TikTok and Instagram Reels.	€109.99 / Year	Allows for efficient, cross-platform video content creation, minimising production costs and maximising efficiency.
Influencers Partnerships	Local influencer collaborations	Strategy involves working with three to four Limerick-based micro-influencers to create authentic sponsored content and drive traffic using unique promo codes.	€6,000 / Year	Focus on local voices for stronger credibility, cost efficiency, and meaningful community engagement, supporting the objective of growing digital membership and awareness.

Influencers Partnerships	Supplies for product seeding (Taster Boxes)	Sending influencers taster boxes to try The Urban Co-op's products and create unboxing videos.	€400 / Year	Encourages authentic user-generated-style content and product promotion.
Offline Integration	Print & in-store media, co-branding materials	Development of marketing materials like posters for in-store promotion and community events.	€1,000 / Year	Necessary to support quarterly offline events and bridge the digital and physical communities.
Offline Integration	Hosting of quarterly event (e.g., Spring into Sustainability)	Covering costs like renting public space, permits, security, insurance, logistic costs, materials for mini farmers' markets, cooking demos, and yoga classes.	€8,000 / Year	Strengthens community ties and directly addresses the target audience's high concern for health and wellbeing, aiming to boost event attendance by 25%.
Offline Integration	Hosting monthly community/wellness events	Costs associated with hosting smaller, regular events like meditation and patchwork classes in the Wellness Hub.	€4,000 / Year	Supports the initiative to strengthen community engagement through wellness and education.
Design Software	Canva Pro	Creating event posters, Instagram stories, and on-site print visuals.	€156/year	Ensures design consistency with campaign visual identity.
Design Software	Creation of branded AR Lenses	Cost to develop a simple Augmented Reality (AR) filter for Instagram/TikTok to increase engagement and visibility.	€500 / Year	Innovative way to encourage user interaction and support the awareness goal.
Social Media Scheduling & Analytics	Meta Business Suite, Instagram Insights, TikTok analytics	Used to schedule and track engagement for event promotion posts.	FREE	Already integrated with TikTok & Meta. Enables automated post scheduling and performance monitoring.
Cross-platform analytics & post automation	Metricool	To schedule and monitor cross-platform content performance, including TikTok and Instagram.	€144/year	Crucial for coordinating campaigns, measuring content ROI, and simplifying analytics.
UGC Prize	N/A	Monthly prize for best #MyCoopBasket post to incentivise User-Generated Content (UGC) campaigns.	€600/year	Incentivises community participation and provides authentic, valuable content at a low cost. Supports the goal of building authenticity and trust.
Event Sign-up & tracking	QR Code Generator (Canva Pro built-in)	QR codes linked to Google Forms for seamless event sign-ups and attendance tracking.	Included already	Simplifies attendance tracking and is essential for linking offline promotion to the CRM.
Data collection & CRM link	Google Forms / HubSpot CRM integration	Captures event sign-ups and adds them to CRM for follow-up emails.	FREE	Essential for tracking interaction patterns, ensuring data accuracy, and enabling targeted messaging/retention campaigns.
Event Management Platform	Eventbrite	Used for managing wellness workshops and paid-entry events to manage attendance and reminders.	~3% ticket fee or FREE	Offers professional event management, which enhances the customer experience and ensures accurate attendance data.

Project coordination & file storage	Meta Suite, Google Workspace	Used for campaign planning, asset sharing, and communication across the team.	€600/year (for 6 users)	Ensures efficient internal coordination and secure, organised file sharing
Website Analytics	Matomo (Cloud Plan)	Privacy-first web analytics platform, essential for continuous Conversion Rate Optimisation (CRO).	€220/year	Aligns with the Co-op's ethical focus on data ownership and GDPR compliance, providing unsampled, accurate data.
Website Redesign Tool	Framer	Tool used for the website redesign to increase landing page and member conversion.	FREE	Necessary for implementing CRO-focused design, which is crucial for high performance in PPC campaigns and conversion rates.
Website Improvement	Update to digital payments and order tracking	Cost associated with developing and implementing essential e-commerce features for a seamless omni-channel experience.	€1,000 / Year	A core business initiative to reduce cart abandonment rates and build customer trust, directly impacting revenue and profitability.
Email Marketing	Mailchimp	Tool to manage the Welcome Series, Monthly Newsletter, Cart Abandonment, and Reactivation Campaigns.	€300 / Year	Essential for member retention and recovering lost sales. The cost is volume-dependent but critical for member engagement.
Data Collection & CRM	HubSpot CRM (Starter/Basic Plan)	Central system for managing the member portal, email marketing, and linking social media effectiveness to commercial results.	€500 / Year	Manages the Loyalty Program and membership, linking all marketing channels to business value.

Total: 74.029,99€

Control and Evaluation

This digital marketing plan's success will be measured through KPIs across awareness, engagement, conversion, and retention.

Metrics from Instagram Insights, TikTok Analytics, and Metricool, such as follower growth, engagement rate, reach, impressions, saves, video views, shares, likes, and watch time, will be tracked, aiming for a 30% follower increase and 5–8% engagement on Instagram, and 8–12% on TikTok, via storytelling and influencer collaborations. Sentiment analysis will assess message tone and feedback. Data guides strategies, with negative feedback handled professionally. Paid media effectiveness is measured by click-through rates, cost per click, and customer acquisition cost, reflecting ad performance and cost-efficiency. Typical CTRs for local retail campaigns are 1.5–3% on Meta and 4–6% on Google Search, and customer acquisition costs below 5€.

Website performance, tracked through Matomo and GA 4, will focus on bounce rate, session duration, navigation paths, and conversion rate, aiming to increase online orders by 40% and raise the average order value by 5%. Success will also be measured through total e-commerce revenue, Repeat Purchase Rate, and landing page Conversion Rate. SEO performance will be tracked through organic traffic and keyword rankings. Abandoned carts will be monitored via Mailchimp, which sends reminder emails to users who leave their orders incomplete. A recovery rate of 10–15% helps identify checkout drop-offs and if reminders prompt returns. Email success will be assessed by open rates (35–40%), click-through rates (6–10%), unsubscribe rates, and responses. Metrics for the Welcome Series and Monthly Newsletter include the completion of key actions and early engagement drops. The reactivation rate will measure campaign reactivation, email performance, and conversions.

Event performance will be tracked through QR-code sign-ups, Eventbrite attendance, and repeat participation, to increase registrations by 25%, attendance by 10%, and repeat involvement by 15%.

All digital and offline activities will be integrated through HubSpot CRM, allowing the Co-op to track how touchpoints contribute to membership growth, loyalty card usage, and repeat purchases. HubSpot manages the Loyalty Program and links marketing channels to business value, measuring ROI. The CRM tracks submissions, comments, or registrations to build first-party data for personalised outreach. A 25%+ increase in members and repeat visits will show if the strategy helps build long-term community ties. Monthly KPI reviews and quarterly assessments will use data to refine content, targeting, budget, and user experience. Automated workflows send personalised emails or event reminders, with feedback informing future strategy.
